

Best React Learning Resources

By Lumo AI

01. GeeksforGeeks - 10 Best React JS Courses [2025]

One of the best courses for learning React is LinkedIn Learning's React JS Essential Training, it is designed to provide a solid understanding of React's core principles. The course is structured to take you from a beginner to an intermediate level, covering essential topics like components, state, and props, as well as introducing you to more advanced concepts like context and hooks.

02. DEV Community - Free resources that helped me master React

This free course is created by the Scrimba team with one of the best instructors I have learnt from - Bob Ziroll, this course can be done by anyone who has a basic grasp over JavaScript - though, it's not recommended to dive right into React without knowing JavaScript well. The course is composed of 4 modules and 152 interactive sessions along with 8 projects that you'll be building alongside learning React.

03. freeCodeCamp Forum - Help me find few good react courses?

React - The Complete Guide (incl Hooks, React Router, Redux) By Maximillian is pretty good, it's really in depth as it's 45 hours long. It assumes no previous knowledge of

React JS, so it really builds up from scratch onto more of a solid understanding of it towards the end.
